# ZYTAZE™

## Proven to Enhance Botulinum Toxin Injections

Prescription-only ZYTAZE™ provides nutritional support to enhance the effectiveness and duration of botulinum toxin injections. This unique blend of highly bioavailable zinc and phytase (an enzyme that effectively breaks down phytates and maximizes zinc absorption) is available in a 10 capsule blister pack for dosage monitoring to eliminate the potential for zinc toxicity.

ZYTAZE™ is time sensitive and should be taken four days prior to and on the day of receiving botulinum toxin injections. For more information, visit [www.zytaze.com](http://www.zytaze.com) or [click here](#).

**Rx Do Not Substitute.**

***This proprietary blend of zinc and phytase is specially formulated to increase bioavailability.***

**ZYTAZE™ is time sensitive, so stock today!**
