

Lilly Insulin packaging sizes are changing.

Lilly labeling and safety information is now LARGER.

Patient safety is one of our greatest concerns. To promote safety among patients, Lilly is pleased to provide new, easier-to-read Patient Package Inserts (PPI) and Physician Inserts (PI). The inserts have increased in size to accommodate **the new type size, which is bigger and easier for patients to read.** As a result, Lilly Insulin product packaging will be increasing slightly in size.

Product formulation and product NDC will not be affected. You can expect to see these changes transition into the market place during July 2007 through February 2008. Lilly product buyers should dispense and order product as normal; **they should not return in-date material or inventory.**

Humalog

insulin lispro injection (rDNA origin)

Humulin[®]
human insulin
(rDNA origin)

Note: updated Lilly logo
