- Save your qualified patients up to \$100 off ProAir HFA*
- Prescribing Information

*Up to \$20 off their next 5 prescriptions

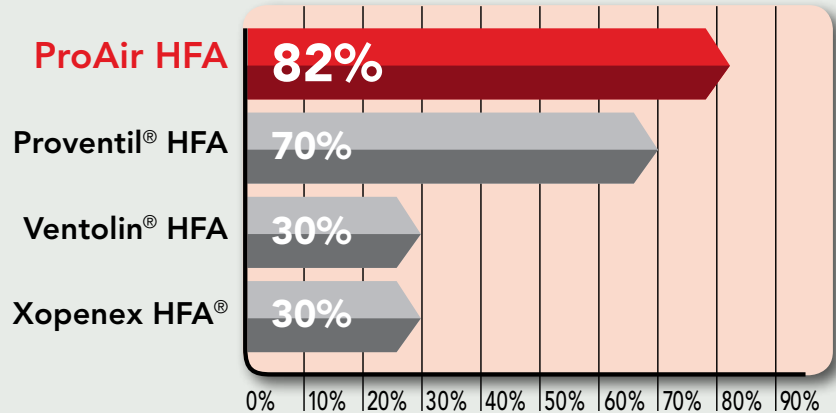

ProAir HFA offers more access...

- Preferred on 82% of commercial formularies² – means patients pay the lowest out-of-pocket costs
- Covered on 91% of commercial formularies² – means ProAir HFA is available to more patients

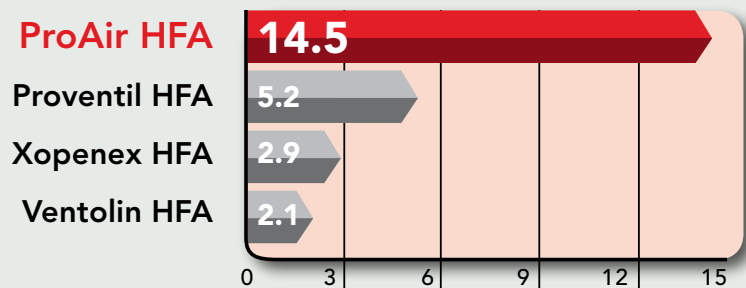

...and prescriptions

- Over 14 million in 2008 – more than all other albuterol HFA inhalers combined¹

Preferred brands by formulary

Total prescriptions dispensed since January 2008 (in millions)¹

More access, more prescriptions, and more reasons to dispense ProAir HFA.

ProAir® HFA is indicated in patients 4 years of age and older for the treatment or prevention of bronchospasm with reversible obstructive airway disease and for the prevention of exercise-induced bronchospasm.

Important Safety Information

- Inhaled albuterol sulfate can produce paradoxical bronchospasm that may be life-threatening. It should be recognized that paradoxical bronchospasm, when associated with inhaled formulations, frequently occurs with the first use of a new canister.
- Fatalities have been reported in association with excessive use of inhaled sympathomimetic drugs in patients with asthma.
- ProAir® HFA, as with all sympathomimetic amines, should be used with caution in patients with cardiovascular disorders (especially coronary insufficiency, cardiac arrhythmias, and hypertension), convulsive disorders, hyperthyroidism, and diabetes.
- Potential drug interactions can occur with beta-blockers, diuretics, digoxin, or monoamine oxidase inhibitors, and tricyclic antidepressants.
- Do not exceed the recommended dose.
- Adverse events, which occurred at an incidence rate of at least 3% with ProAir® HFA, include headache, tachycardia, pain, dizziness, pharyngitis, and rhinitis.
